PROFILE

Software Engineer and Technical Product Delivery Specialist with 5+ years of experience in mobile application delivery, application support, and software releases. Built and released 30+ white label React Native applications for iOS and Android, managed delivery for more than 100 mobile app clients. Led a React Native upgrade, UI improvements, module enhancements & redesign, and AI feature implementations. Skilled in React Native, Xcode, Android Studio, App Store Connect, Google Play Console, team coordination, and stakeholder communication.

EMPLOYMENT HISTORY

Software Engineer

Euroland.com AB | Jul 2024 – Jul 2026

- Built, configured, tested, and released 30+ white label React Native investor relations mobile applications for iOS and Android for international clients.
- Managed mobile releases using Xcode, Android Studio, App Store Connect, and Google Play Console, including build configuration, code signing, provisioning, testing, store submission, and production release.
- Investigated application and deployment issues across APIs, XML, JSON, TypeScript, JavaScript, HTML, CSS, and platform specific configuration files.
- Coordinated with backend developers, QA, Production, and clients to resolve issues, validate application requirements, and address findings related to Vulnerability Assessment and Penetration Testing or mobile app security.
- Supported the Investor Relations App V3 rollout to approximately 90% of the client application portfolio
- Performed Product Owner duties by coordinating sprint planning, user story creation, backlog coordination, feature prioritization, and release planning.
- Led React Native upgrade, user interface improvements, module enhancements, module redesign, and AI feature implementations.
- Created RCA, incident reports, infrastructure documents, and business requirements documents, and mobile app launch roadmaps for complex client requests.
- Created mobile app analytics reports for external and internal use along with an internal web application for uploading analytics data, generating reports, and reviewing AI assisted insights before client reporting.
- Analyzed mobile app KPIs such as downloads, page views, sessions, user engagement, traffic sources, conversion rates, uninstall rates, persistence rates, daily active users, monthly active users, and push notification performance.
- Explored PostHog analytics implementation and created React dashboards using HogQL.

Product Support Specialist

Euroland.com AB | Jun 2023 – Jun 2024

- Managed application delivery for more than 100 investor relations app clients from requirements collection through development, QA, testing, release, and post release support.
- Coordinated client branding, app configuration, features, content, reports, and other assets with Sales, Customer Success, Development, QA, and Production teams.
- Translated client requirements into technical handover documents, Trello tasks, Figma requirements, and validation expectations along with uploading files through Filezilla FTP.
- Monitored production issues, coordinated investigation and escalation, and followed through until resolution.
- Performed pre release checks, coordinated internal, external, and production testing as well post-launch app support.
- Led weekly mobile production standups to review priorities, blockers, risks, defects, and delivery status.

Application Development Analyst

Accenture Inc. | Jun 2021 – Oct 2022

- Supported Canadian clients using SAP Plant Maintenance and Master Data Governance processes.
- Investigated SAP application issues, analyzed business impact, implemented changes, and monitored outcomes.
- Customized SAP Plant Maintenance modules according to client requirements and business processes.
- Monitored integration points across SAP Plant Maintenance, Production Planning, Materials Management, Financial Accounting and Controlling, and Quality Management.
- Implemented feature enhancements and coordinated issue resolution with SAP Financial Accounting and Controlling and Materials Management teams.

- Supported Master Data Governance migration by validating records, performing data quality checks, and aligning migrated data with governance standards.
- Provided on call support and acted as liaison between operational users, corporate stakeholders, and SAP technical and functional teams.

Manufacturing Product Engineer

Texas Instruments | Dec 2019 – Dec 2020

- Monitored yield and defect KPIs across six integrated circuit product lines and verified compliance with manufacturing and quality requirements.
- Analyzed test results to identify defect patterns and root causes, contributing to a reported 3% reduction in defects and 5% improvement in yield.
- Improved test environments, test cases, and automated testing systems to strengthen quality control and process efficiency.
- Audited production stages, documented process deviations, and coordinated corrective actions with raw materials, equipment, test, and manufacturing teams.

Software Developer Intern

Texas Instruments | Jun 2018 – Jul 2018

- Supported and tested a Spring based Java application supporting a manufacturing machine product line.
- Developed HTML and CSS interfaces, created SQL queries, and used Maven for application packaging.
- Supported deployment using Apache Tomcat and created JUnit tests for application validation and regression testing.

Content Analyst

TaazaCoupons | Apr 2014 – Dec 2016

- Managed 350+ merchant listings and their associated coupons daily while maintaining content accuracy.
- Applied SEO practices to product listings and images, contributing to approximately 3x traffic growth.
- Created advertising copy, product descriptions, website content, and social media content for Twitter, Facebook, Instagram, and YouTube.
- Created promotional images using Photoshop while maintaining consistent brand and content standards.

SKILLS

Mobile Application Delivery:

React Native, Xcode, Android Studio, App Store Connect, Google Play Console, TestFlight, iOS and Android deployment, code signing, provisioning profiles, certificates, entitlements, internal and external testing, release validation

Application Support and Operations:

Application troubleshooting, API investigation, incident management, issue triage, root-cause analysis, production support, regression testing, configuration analysis, technical escalation, release coordination, change coordination, service-level tracking

Programming and Development:

JavaScript, TypeScript, Python, SQL, HTML5, CSS, XML, JSON

Enterprise Applications:

SAP Plant Maintenance, SAP Master Data Governance, SAP application support

Product and Delivery:

Requirements gathering, user stories, technical handover, backlog coordination, sprint planning, Kanban, Agile delivery, release planning, QA coordination, stakeholder communication, risk and dependency tracking

Analytics and Reporting:

Excel, pivot tables, Google Sheets, App Store Connect Analytics, Google Play Console Analytics, Microsoft Clarity, PostHog, HogQL, engagement analysis, conversion analysis, retention analysis, dashboard development

AI Tools:

Stitch for AI-assisted UI design and prototyping;
 Google AI Studio and v0 for prototyping and initial application generation;
 Claude for software assistance;
 VS Code Copilot and Cursor for code completion and development support;
 Gemini for context analysis;
 ChatGPT for general AI assistance and image generation;
 Perplexity for research;
 ElevenLabs for AI text-to-speech;
 Vercel for hosting and deployment

Tools and Platforms:

Git, GitLab, Jira, Confluence, Trello, ServiceNow, Microsoft Teams, FileZilla, Figma, Photoshop, Canva

EDUCATION AND LICENSURE

Licensed Electronics Engineer

2020 – present (Valid until 2028)

Bachelor of Science in Electronics Engineering

Saint Louis University | 2014 – 2019
